

# NEW C CHANNEL launching at IMHX 2016

**CONVEYOR UNITS**  
QUALITY • PERFORMANCE • RELIABILITY

## IMHX 2016 is the venue for the launch of the new C Channel conveyor range

The 'C channel' profile offers numerous benefits to all who deal with our conveyors - from System Integrators, Installation Teams to End Users.

The section maintains its rigid 2.5mm thickness and durable powder coat painted finish and is now formed into an effective 'C' section 175.5mm x 40mm having return folds for retention of the fascia.

The 'C' channel conveyors not only incorporate all of the ancillary items currently available in the 'Z' section format, it now offers the space to house motorised roller circuit boards, air pipe and electrical cables on either, or even both sides of a conveyor.

### Why use us?

- UK's largest manufacturer of Conveyors & Rollers
- High quality aluminium at the same price as steel
- Free in-house testing facility
- 100% onsite manufactured
- Design your Conveyor system
- Full after sales support

100% onsite manufactured in Britain

### The Benefits

1

#### Clean Contours

The streamlined design provides a crisp, clean appearance.

2

#### Concealed Cables

'C' channel on both sides allows both high and low voltage cables to be hidden.

3

#### Clever Clips

Cables are held in place by a the easily installed bespoke cable clip.

4

#### Common CAD Blocks

Dimensionally the range is the same as our existing Range in plan view.

5

#### Cost Conscious

The new integral fascia channel allows quicker installation and reduced costs.

6

#### Connectivity

Integral track joining flats giving perfect alignment and a strong connection.

7

#### Custom Colours

For large volume orders, we can provide the fascia to suit your client's corporate colours.
